The Telling Image Lois Farfel Stark,2018-02-06 Next Generation Indie Book Awards, Best Non Fiction 2019 National Indie Excellence Award Winner Nautilus Book Awards, Gold #1 Amazon Best Seller in Architecture History & Periods Amazon Best Seller in Art Subjects & Themes Seeing the World Through Shape How do humans make sense of the world? In answer to this timeless question, award winning documentary filmmaker, Lois Farfel Stark, takes the reader on a remarkable journey from tribal ceremonies in Liberia and the pyramids in Egypt, to the gravity-defying architecture of modern China. Drawing on her experience as a global explorer, Stark unveils a crucial, hidden key to understanding the universe: Shape itself. The Telling Image is a stunning synthesis of civilization's changing mindsets, a brilliantly original perspective urging you to re-envision history not as a story of kings and wars but through the lens of shape. In this sweeping tour through time, Stark takes us from migratory humans, who imitated a web in round-thatched huts and stone circles, to the urban ladder of pyramids and skyscrapers, organized by hierarchy and measurements, to today's world of interconnected networks. In The Telling Image Stark reveals how buildings, behaviors, and beliefs reflect humans' search for pattern and meaning. We can read the past and glimpse the future by watching when shapes shift. Stark's beautifully illustrated book asks of all its readers: See what you think.

Dior: The Legendary Images Florence Müller, 2014-06-03 Reaching beyond the intimate setting of the fashion show, the photographer paints a portrait of haute couture that takes the couturier's intention to enchant the public and elevates it to the level of the sublime. The great names in photography, the mythical photos that have constructed Dior's image, and the emblematic subjects of the house's iconography—whether they are dreams of a faraway place or captured in the vast open-sky “studios” of Paris or Versailles—are all evoked in this vast panorama that takes us through more than sixty years in the history of fashion photography. Published to accompany the Dior and Fashion Photography exhibition presented at the Musée Christian Dior in Granville, France, this lavish volume presents a wealth of gorgeous photographs that bring the character of the couturier's dresses to life, with each photographer interpreting them in his or her unique style. Legendary contributors include Horst P. Horst, Richard Avedon, Irving Penn, Cecil Beaton, Norman Parkinson, Henry Clarke, William Klein, Helmut Newton, Guy Bourdin, Sarah Moon, Paolo Roversi, Nick Knight, Ines Van Lamsweerde and Vinoodh Matadin, Tim Walker, Willy Vanderperre, Patrick Demarchelier, and many more. Stunning, glamorous, and iconic, Dior and Fashion Photography exemplifies how the haute couture house transcended fashion to enter the realm of legend.

Photography, Essays & Images Beaumont Newhall, 1980 Brings to life the scientists, artists, philosophers, innovators, and entrepreneurs who developed the art and science of photography.

About to Die Barbie Zelizer, 2010-12-01 Due to its ability to freeze a moment in time, the photo is a uniquely powerful device for ordering and understanding the world. But when an image depicts complex, ambiguous, or controversial events--terrorist attacks, wars, political assassinations--its ability to influence perception can prove deeply unsettling. Are we really seeing the world as it is or is the image a fabrication or projection? How do a photo's content and form shape a viewer's impressions? What do such images contribute to historical memory? About to Die focuses on one emotionally charged category of news photograph--depictions of individuals who are facing imminent death--as a prism for addressing such vital questions. Tracking events as wide-ranging as the 1906 San Francisco Earthquake, the Holocaust, the Vietnam War, and 9/11, Barbie Zelizer demonstrates that modes of journalistic depiction and the power of the image are immense cultural forces that are still far from understood. Through a survey of a century of photojournalism, including close analysis of over

sixty photos, *About to Die* provides a framework and vocabulary for understanding the news imagery that so profoundly shapes our view of the world.

Performing Image Isobel Harbison, 2019-04-09 An examination of how artists have combined performance and moving image for decades, anticipating our changing relation to images in the internet era. In *Performing Image*, Isobel Harbison examines how artists have combined performance and moving image in their work since the 1960s, and how this work anticipates our changing relations to images since the advent of smart phones and the spread of online prosumerism. Over this period, artists have used a variety of DIY modes of self-imaging and circulation—from home video to social media—suggesting how and why Western subjects might seek alternative platforms for self-expression and self-representation. In the course of her argument, Harbison offers close analyses of works by such artists as Robert Rauschenberg, Yvonne Rainer, Mark Leckey, Wu Tsang, and Martine Syms. Harbison argues that while we produce images, images also produce us—those that we take and share, those that we see and assimilate through mass media and social media, those that we encounter in museums and galleries. Although all the artists she examines express their relation to images uniquely, they also offer a vantage point on today's productive-consumptive image circuits in which billions of us are caught. This unregulated, all-encompassing image performativity, Harbison writes, puts us to work, for free, in the service of global corporate expansion. Harbison offers a three-part interpretive framework for understanding this new proximity to images as it is negotiated by these artworks, a detailed outline of a set of connected practices—and a declaration of the value of art in an economy of attention and a crisis of representation.

The Lives of Images, Vol. II: Analogy, Attunement, and Attention Stanley Wolukau-Wanambwa, 2021 *Analogy, Attunement, and Attention* brings together a uniquely contemporary and diverse set of voices to address the complex sets of

relationships that the photograph creates between its viewers and their bodies, minds, and sense of the physical and metaphysical world. This volume examines our changing relationship to space and selfhood as mediated by the lens, the print, the screen, the computer, and the multitude of networked technologies built around the image--

Snapshot Photography Catherine Zuromskis,2021-08-24 An examination of the contradictions within a form of expression that is both public and private, specific and abstract, conventional and countercultural. Snapshots capture everyday occasions. Taken by amateur photographers with simple point-and-shoot cameras, snapshots often commemorate something that is private and personal; yet they also reflect widely held cultural conventions. The poses may be formulaic, but a photograph of loved ones can evoke a deep affective response. In *Snapshot Photography*, Catherine Zuromskis examines the development of a form of visual expression that is both public and private. Scholars of art and culture tend to discount snapshot photography; it is too ubiquitous, too unremarkable, too personal. Zuromskis argues for its significance. Snapshot photographers, she contends, are not so much creating spontaneous records of their lives as they are participating in a prescriptive cultural ritual. A snapshot is not only a record of interpersonal intimacy but also a means of linking private symbols of domestic harmony to public ideas of social conformity. Through a series of case studies, Zuromskis explores the social life of snapshot photography in the United States in the latter half of the twentieth century. She examines the treatment of snapshot photography in the 2002 film *One Hour Photo* and in the television crime drama *Law and Order: Special Victims Unit*; the growing interest of collectors and museum curators in “vintage” snapshots; and the “snapshot aesthetic” of Andy Warhol and Nan Goldin. She finds that Warhol’s photographs of the Factory community and Goldin’s intense and intimate photographs of friends and family use the conventions of the snapshot to celebrate an alternate version of “family values.” In today’s digital age, snapshot photography has become even more ubiquitous and ephemeral—and, significantly, more public. But buried within snapshot photography’s mythic construction, Zuromskis argues, is a site of democratic possibility.

The Ground of the Image Jean-Luc Nancy,2009-08-25 The renowned philosopher provides “noteworthy contributions to themes connected with images, imagination, representation, aesthetics, and . . . religion.” —*Journal of American Academy of Religion* What is this power that lies in the depths and recesses of an image—which is always only an impenetrable surface?

What secrets are concealed in the ground or in the figures of an image—which never does anything but show just exactly what it is and nothing else? How does the immanence of images open onto their unimaginable others, their imageless origin? In this collection of writings on images and visual art, Jean-Luc Nancy explores such questions through an extraordinary range of references. From Renaissance painting and landscape to photography and video, from the image of Roman death masks to the language of silent film, from Cleopatra to Kant and Heidegger, Nancy pursues a reflection on visibility that goes far beyond the many disciplines with which it intersects. He offers insights into the religious, cultural, political, art historical, and philosophical aspects of the visual relation, treating such vexed problems as the connection between image and violence, the sacred status of images, and, in a profound and important essay, the forbidden representation of the Shoah. In the background of all these investigations lies a preoccupation with finitude, the unsettling forces envisaged by the images that confront us, the limits that bind us to them, the death that stares back at us from their frozen traits and distant intimacies. In these vibrant and complex essays, a central figure in European philosophy continues to work through some of the most important questions of our time.

RGB-D Image Analysis and Processing Paul L. Rosin, Yu-Kun Lai, Ling Shao, Yonghuai Liu, 2019-10-26 This book focuses on the fundamentals and recent advances in RGB-D imaging as well as covering a range of RGB-D applications. The topics covered include: data acquisition, data quality assessment, filling holes, 3D reconstruction, SLAM, multiple depth camera systems, segmentation, object detection, saliency detection, pose estimation, geometric modelling, fall detection, autonomous driving, motor rehabilitation therapy, people counting and cognitive service robots. The availability of cheap RGB-D sensors has led to an explosion over the last five years in the capture and application of colour plus depth data. The addition of depth data to regular RGB images vastly increases the range of applications, and has resulted in a demand for robust and real-time processing of RGB-D data. There remain many technical challenges, and RGB-D image processing is an ongoing research area. This book covers the full state of the art, and consists of a series of chapters by internationally renowned experts in the field. Each chapter is written so as to provide a detailed overview of that topic. *RGB-D Image Analysis and Processing* will enable both students and professional developers alike to quickly get up to speed with contemporary techniques, and apply RGB-D imaging in their own projects.

Image Analysis and Processing -- ICIAP 2009 Pasquale Foggia, Carlo Sansone, Mario Vento, 2009-08-29 This book constitutes the refereed proceedings of the 15th International Conference on Image Analysis and Processing, ICIAP 2009, held in Vietri sul Mare, Italy, in September 2009. Front-End Vision and Multi-Scale Image Analysis Bart M. Haar Romeny, 2008-10-24 Many approaches have been proposed to solve the problem of finding the optic flow field of an image sequence. Three major classes of optic flow computation techniques can be discriminated (see for a good overview Beauchemin and Barron [Beauchemin19951]: gradient based (or differential) methods; phase based (or frequency domain) methods; correlation based (or area) methods; feature point (or sparse data) tracking methods; In this chapter we compute the optic flow as a dense optic flow field with a multi scale differential method. The method, originally proposed by Florack and Nielsen [Florack1998a] is known as the Multiscale Optic Flow Constraint Equation (MOFCE). This is a scale space version of the well known computer vision implementation of the optic flow constraint equation, as originally proposed by Horn and Schunck [Horn1981]. This scale space variation, as usual, consists of the introduction of the aperture of the observation in the process. The application to stereo has been described by Maas et al. [Maas 1995a, Maas 1996a]. Of course, difficulties arise when structure emerges or disappears, such as with occlusion, cloud formation etc. Then knowledge is needed about the processes and objects involved. In this chapter we focus on the scale space approach to the local measurement of optic flow, as we may expect the visual front end to do.

Intelligent Image Processing in Prolog Bruce G. Batchelor, 2012-12-06 After a slow and somewhat tentative beginning, machine vision systems are now finding widespread use in industry. So far, there have been four clearly discernible phases in their development, based upon the types of images processed and how that processing is performed: (1) Binary (two level) images, processing in software (2) Grey-scale images, processing in software (3) Binary or grey-scale images processed in fast, special-purpose hardware (4) Coloured/multi-spectral images Third-generation vision systems are now commonplace, although a large number of binary and software-based grey-scale processing systems are still being sold. At the moment, colour image processing is commercially much less significant than the other three and this situation may well remain for some time, since many industrial artifacts are nearly monochrome and the use of colour increases the cost of the equipment significantly. A great deal of colour image processing is a straightforward extension of standard grey-scale methods. Industrial applications of machine vision systems can also be sub divided, this time into two main areas, which have largely retained distinct identities: (i) Automated Visual Inspection (A VI) (ii) Robot Vision (RV) This book is about a fifth generation of industrial vision systems, in which this distinction, based on applications, is blurred and the processing is marked by being much smarter (i. e. more intelligent) than in the other four generations.

Magnetic Resonance Imaging of Bone and Soft Tissue Tumors and Their Mimics A.M.A. de Schepper, A.D.

Degryse, 2012-12-06 Magnetic resonance imaging has already become a most valuable imaging modality in the diagnostic work-up of musculoskeletal neoplasms. While high accuracy of MRI for staging purposes has been proven, we will focus in this monograph on the characterization of primary bone and soft tissue tumors by MRI. The major purpose of this monograph

is to provide an atlas of magnetic resonance features of primary bone and soft tissue tumors for radiologists, orthopedic surgeons and physiotherapists. The results presented are based on investigations of 94 primary bone and soft tissue tumors and mimicking conditions by magnetic resonance imaging. Although the scale of the material allows for statistical handling, the number of patients per subgroup is too small to come to definite conclusions. We will therefore limit ourselves to the description of and comments on a great number of cases to illustrate the diagnostic potential of this new imaging modality. We would like to thank the anonymous cooperators: referring clinicians, pathologists, nurses, technicians and secretaries whose help enabled us to present this monograph. We would also like to express our gratitude to the firms Siemens AG and Schering AG for technical support.
