As environmental sustainability and public health issues become increasingly complex, new, innovative and interdisciplinary approaches to seeking solutions to these problems become essential. The purpose of this course is to train doctoral students to effectively address these complex issues. The course will:

- be offered as a weekly seminar and experiential laboratory on Tuesday evenings
- involve faculty from KSAS, WSE, SPH and CBS
- is open to all Johns Hopkins University Ph.D. students from any School
- review fundamental principles of sustainability science and public health (no prior knowledge of either discipline is required)
- explore a range of analytical frameworks and research tools from relevant disciplines
- provide hands-on training in the management, coordination, and practice of interdisciplinary research through team-building exercises and the application of interdisciplinary research methods and skills to case studies
