

Constructivism A Holistic Approach To Teaching And Learning

Prof. Dr. Bilal Semih Bozdemir

Cross-Cultural Studies in Curriculum Claudia Eppert, Hongyu Wang, 2007-09-14 This volume broadens the horizon of educational research in North America by introducing a comprehensive dialogue between Eastern and Western philosophies and perspectives on the subject of curriculum theory and practice. It is a very timely work in light of the progressively globalized nature of education and educational studies and the increasing

Practical Perspectives on Educational Theory and Game Development Marzullo, Fabio Perez, Oliveira, Felipe Antonio de, 2021-06-25 The video game market continues to increase, reaching millions of users on a variety of platforms and revealing how engaging and pervasive gaming can be. Games create engagement and offer both entertainment and a powerful way to understand and interact with the world. It is natural that educators see the potential of games as a learning tool that can support students who have difficulties learning and also reinvent it. Practical Perspectives on Educational Theory and Game Development is a critical scholarly resource that combines educational scenarios and game fundamentals in order to improve the way people learn and evolve. The book supports professionals with the creation of strategies for using gamification and game-based learning theory with effectiveness and measured results. Featuring a wide range of topics such as entrepreneurship, gamification, and traditional learning, this book is ideal for academicians, education professionals, curriculum designers, educational game developers, researchers, and students.

Constructivist Learning Environments Brent Gayle Wilson, 1996

Integrated and Holistic Perspectives on Learning, Instruction and Technology J.M. Spector, T.M. Anderson, 2005-12-17 One outcome of recent progress in educational technology is strong interest in providing effective support for learning in complex and ill-structured domains. We know how to use technology to promote understanding in simpler domains (e.g., orientation information, procedures with minimal-branching, etc.), but we are less sure how to use technology to support understanding in more complex domains (e.g., managing limited resources, understanding environmental impacts, etc.). Such domains are increasingly significant for society. Technology (e.g., collaborative tele-learning, digital repositories,

interactive simulations, etc.) can provide conceptually and functionally rich domains for learning. However, this introduces the problem of determining what works in which circumstances and why. Research and development on these matters is reflected in this collection of papers. This research suggests a need to rethink foundational issues in educational philosophy and learning technology. One major theme connecting these papers is the need to address learning in the large - from a more holistic perspective. A second theme concerns the need to take learners where and as they are, integrating technology into effective learning places. Significant and systematic progress in learning support for complex domains demands further attention to these important issues.

Improving Human Learning in the Classroom George R. Taylor, Loretta MacKenney, 2008-10-03 Improving Human Learning in the Classroom provides a functional and realistic approach to facilitate learning through a demonstration of commonalities between the various theories of learning. Designed to assist educators in eliciting students' prior knowledge, providing feedback, transfer of knowledge, and promoting self-assessment, Taylor and MacKenney provide proven strategies for infusing various learning theories into a curriculum, guiding educators to find their own strategies for promoting learning in the classroom. Both quantitative and qualitative research methods investigate learning theories and reforms in education. Quantitative data sources build the theoretical framework for educating the student, as well as developing strategies for closing the achievement gap. Taylor and MacKenney fuse personal experiences with solid strategies for human learning.

A Conceptual Framework for Educational Objectives A. Dean Hauenstein, 1998 A Conceptual Framework for Educational Objectives introduces a framework for holistic learning that restructures the traditional taxonomies of the cognitive, affective, and psychomotor domains while unifying them and reducing the number of categories and subcategories with a new behavioral domain. The author discusses the application of a student-centered curriculum and instruction by integrating subject areas, while working from the concept of constructivism, in which individuals construct their knowledge from their own experiences. This proposal makes the assumption that students cannot learn material without an experience with it, and creates a much simpler taxonomy focused on the same traditional domains, yet applies much more easily to the whole learning process so that no part of the learning process is left. Holistic learning leads to complete, effective teaching with a more focused and less complex system.

Education Psychology Prof. Dr. Bilal Semih Bozdemir, The function of reinforcement and punishment in the behavioral paradigm illustrates the intricacies of learning processes, fostering a deeper understanding of behavioral modification strategies. Moreover, the interplay between environment and behavior has underscored the necessity of context in facilitating effective learning experiences. Although critiques and limitations have been thoroughly examined, they serve to highlight the evolution of behaviorist thought and its ongoing relevance amidst a broader landscape of learning theories.

New Perspectives in Special Education Michael Farrell,2012-05-04 This book should be read by everyone who wants to understand special education today. New Perspectives in Special Education opens the door to the fascinating and vitally important world of theory that informs contemporary special education. It examines theoretical and philosophical orientations such as 'positivism', 'poststructuralism' and 'hermeneutics', relating these to contemporary global views of

special education. Offering a refreshingly balanced view across a broad range of debates, this topical text guides the reader through the main theoretical and philosophical positions that may be held with regard to special education, and critically examines positions that often go unrecognised and unquestioned by practitioners and academics alike. It helps the reader to engage with and question the positions taken by themselves and others, by providing thinking points and suggestions for further reading at the end of each chapter. Perspectives covered include: Positivism and empiricism Phenomenology and hermeneutics Historical materialism and critical theory Holism and constructivism Structuralism and post structuralism Pragmatism and symbolic interactionism Psychoanalysis Postmodernism and historical epistemology Anyone wishing to gain a fuller understanding of special education should not be without this stimulating and much needed text.

Integrative Learning Mary Taylor Huber, Pat Hutchings, 2004 One of the great challenges in higher education is to help students integrate their learning. The capacity to make connections is essential to the conduct of personal, professional, and civic life, and is at the very heart of liberal education. It is also, arguably, more important than ever, and more difficult to achieve, as students transfer among multiple institutions and struggle to balance work and study. Indeed, many of the basic structures of academic life encourage them to see their courses as isolated requirements to complete. This paper explores the challenges to integrative learning today as well as its longer tradition and rationale within a vision of liberal education. In outlining promising directions for campus work, the authors draw on AAC&U's landmark report Greater Expectations as well as the Carnegie Foundation's long-standing initiative on the scholarship of teaching and learning. Readers will find a map of the terrain of interactive learning on which promising new development in undergraduate education can be cultivated, learned from, and built upon.

Developing Your Portfolio - Enhancing Your Learning and Showing Your Stuff Marianne Jones, Marilyn Shelton, 2011-03-07 Portfolios have often been used as a way for teachers to monitor and assess their students' progress, but this book picks up on the current trend of using portfolios to assess teachers themselves as part of their degree requirements. As a professional development tool, portfolios are also useful for classroom teachers in evaluating their practice, and in showcasing their skills and accomplishments for use in interviews. Veteran teacher educators Marianne Jones and Marilyn Shelton provide practical and comprehensive guidance specific to the needs of pre- and in-service teachers of young children. This thoroughly revised and updated new edition features: A flexible and friendly approach that guides students at varying levels of experience through the portfolio process New material on the portfolio planning stage and additional coverage on the importance of developing a personal philosophy A companion website with additional instructor materials such as printable templates, exercises for improving portfolio skills, and more Both theoretical and practical, the book addresses issues and mechanics related to process and product, instruction and guidance techniques, the role of reflection, and assessment strategies. With concrete examples, rubrics, tips, and exercises, this book will provide a step-by-

step guide to creating a professional teaching portfolio.

Emerging Methods and Paradigms in Scholarship and Education Research Ling, Lorraine, Ling, Peter, 2019-08-30
There is a renaissance in the use of the term “scholarship,” as it is being used to define areas of academic endeavour, describe academic work and achievements, and measure the quality of higher education. Although all academicians are required to engage in scholarship, it is difficult to navigate as there is a misunderstanding of this concept as new methods and approaches emerge. *Emerging Methods and Paradigms in Scholarship and Education Research* is an essential academic book that is designed to explain the areas of scholarship and their contemporary relationship to key components of academic work: research, teaching, service, and engagement. The chapter authors explore conceptions of scholarship, paradigms, and methods that fit a variety of contexts and needs. Highlighting a wide range of approaches from scientific realism and neo-positivism to interpretative, transformative, and pragmatic educational strategies and policy, this book is ideal for researchers, teachers, educational leaders, academicians, educational policymakers, and quality assurance agencies.

In Search of Understanding Jacqueline G. Brooks, Martin Brooks, 1999-07-15
The activities that transpire within the classroom either help or hinder students' learning. Any meaningful discussion of educational renewal, therefore, must focus explicitly and directly on the classroom, and on the teaching and learning that occur within it. This book presents a case for the development of classrooms in which students are encouraged to construct deep understandings of important concepts. Jacqueline Grennon Brooks and Martin Brooks present a new set of images for educational settings, images that emerge from student engagement, interaction, reflection, and construction. They have considerable experience in creating constructivist educational settings and conducting research on those settings. Authentic examples are provided throughout the book, as are suggestions for administrators, teachers, and policymakers. For the new edition of their popular book, the authors have written an introduction that places their work in today's educational renewal setting. Today, they urge, the case for constructivist classrooms is much stronger and the need more critical. Note: This product listing is for the Adobe Acrobat (PDF) version of the book.

Educational Curricula Jennifer N. Casey, 2008
In formal education, a curriculum (plural curricula) is the set of courses, and their content, offered at a school or university. As an idea, curriculum stems from the Latin word for race course, referring to the course of deeds and experiences through which children grow and mature in becoming adults. Crucial to the curriculum is the definition of the course objectives that usually are expressed as learning outcomes and normally include the program's assessment strategy. These outcomes and assessments are grouped as units (or modules), and, therefore, the curriculum comprises a collection of such units, each, in turn, comprising a specialised, specific part of the curriculum. So, a typical curriculum includes communications, numeracy, information technology, and social skills units, with specific, specialised teaching of each. This book presents research on educational curricula from around the world.

Methods and Paradigms in Education Research Ling, Lorraine, Ling, Peter, 2016-10-31 The tools used in data collection have the ability to influence the ways information is perceived and generated. Analyzing research processes is a concept that can be overlooked, though is as important as the information itself. **Methods and Paradigms in Education Research** addresses the innovative formulaic approaches taken in research to challenge their effectiveness. Featuring coverage on selection, forms, and analytical procedures of data, this publication is essential for researchers, students, and academicians seeking current information on understanding research methodology.
