Dr. B.C. Punmia, Ashok Kr. Jain, Arun Kr. Jain

Elements of Environmental Engineering K N Dugal, 2008 The book is the outcome of Author's experience gained while dealing with the manifold aspects of the topics covered both in the teaching as well as in the practical fields.

Elements of Water Resources Engineering K. N. Duggal, 1996 The Book conforms to the modern concept of treating the diversified problems of water resources engineering through a multi-disciplinary and integrated approach and incorporating it in the educational curriculum for effective and comprehensive teaching. It specifically deals with the principal segments of water resources engineering which include hydrology, ground water, water management for irrigation and power, flood control, engineering economy in water resources projects for flood control, project planning in water resources, concrete and earth dams. Because of the multi-disciplinary nature of water resources engineering problems, it is seldom possible to do full justice to the subjects unless the teaching imparts background knowledge of the allied disciplines, viz., probability and statistics, engineering economics and systems engineering. The book represents an attempt to fulfill this primal need. The book would primarily benefit students doing graduation in civil engineering and those appearing in section-B examination of the Institution of Engineers (India). Besides, some of the topics covered in the book would also be of much use by post-graduate students in water resources engineering.

Building Materials S.K. Duggal, 2017-12-04 This text on building materials includes discussion of structural clay products, rocks and stones, wood, materials for making concrete, ferrous and non-ferrous metals, and miscellaneous materials.

TEXTBOOK OF ENVIRONMENTAL ENGINEERING P. VENUGOPALA RAO, 2002-01-01 Designed for a first-course in environmental engineering for undergraduate engineering and postgraduate science students, the book deals with environmental pollution and its control methodologies. It explains the basic environmental technology - environmental sanitation, water supply, waste management, air pollution control and other related issues - and presents a logical and systematic treatment of topics. The book, an outgrowth of author's long experience in teaching the postgraduate science and engineering students, is presented in a student-oriented approach. It is interspersed with solved examples and illustrations to reinforce many of the concepts discussed and apprise the readers of the current practices in areas of water processing, water distribution, collection and treatment of domestic sewage and industrial waste water, and control of air pollution. It emphasizes fundamental concepts and basic applications of environmental technology for management of environmental

problems. Besides students, the book will be useful to the academia of environmental sciences, civil/environmental engineering as well as to environmentalists and administrators working in the field of pollution control.

Steel Structures Rolf Kindmann, Matthias Kraus, 2012-03-07 This book presents the design of steel structures using finite element methods (FEM) according to the current state of the art in Germany and the rest of Europe. After a short introduction on the basics of the design, this book illustrates the FEM with a focus on internal forces, displacements, critical loads and modal shapes. Next to finite element procedures for linear calculations considering the stress states of normal force, biaxial bending and warping torsion, non-linear calculations and the stability cases of flexural buckling, lateral torsional buckling and plate buckling are concentrated on significantly. In this context, design procedures for stability

according to the standard Eurocode 3 is introduced and discussed. In addition, important fundamental issues are covered, such as the determination of cross-section properties as well as the elastic and plastic cross-section resistance. Complementary, finite element procedures for cross sections are dealt with, which will have an increasing importance in future. This book has evolved within the teaching activities of the authors in the lecture Computer-oriented Design of Steel Structures on the Master's Program Computational Engineering at the University of Bochum. It covers the total variety of demands needed to be discussed for the safe, economic and modern design of steel structures.
