Who will bear the cost of REDD+? Evidence from subnational REDD+ initiatives Cecilia Luttrell, Erin Sills, Riza Aryani, Andini Desita Ekaputri, Maria Febe Evnike, 2016-08-16 REDD+ is based on the premise that actors with an interest in reducing emissions will pay for the costs of reducing deforestation. However, concerns have been raised about whether stakeholders in REDD+ host countries will end up bearing at least some of the costs. Drawing on a pan-tropical dataset covering 22 subnational REDD+ initiatives in five countries, we examine the degree to which these concerns about REDD+ are played out. We find that many institutions in REDD+ host countries, particularly subnational governments, are bearing implementation costs not covered by the budgets of subnational REDD+ initiatives. Opportunity costs are typically evaluated in terms of the value of production foregone, but can also be assessed in terms of the number of people affected. We show that expectations about which stakeholder groups will bear the greatest opportunity costs depend on whether the metric is total value or total number of people. The stakeholder groups with the greatest number of people affected are likely to be small-scale actors engaged in legally ambiguous land uses, which is a potential barrier to recognition and compensation of their costs. Our study clarifies the distribution of implementation and opportunity costs by characterizing the institutions and stakeholders that bear the costs of different types of subnational REDD+ initiatives. Thus, it complements common discourses in the benefit-sharing literature about which stakeholder groups have legitimate claims on revenues from REDD+ and should therefore be considered in the design of benefit-sharing systems.

Guidelines for Clinical Practice Institute of Medicine, Committee on Clinical Practice Guidelines, 1992-02-01 Guidelines for the clinical practice of medicine have been proposed as the solution to the whole range of current health care problems. This new book presents the first balanced and highly practical view of guidelines—their strengths, their limitations, and how they can be used most effectively to benefit health care. The volume offers: Recommendations and a proposed framework for strengthening development and use of guidelines. Numerous examples of guidelines. A ready-to-use instrument for assessing the soundness of guidelines. Six case studies exploring issues involved when practitioners use guidelines on a daily basis. With a real-world outlook, the volume reviews efforts by agencies and organizations to disseminate guidelines and examines how well guidelines are functioning—exploring issues such as patient information, liability, costs, computerization, and the adaptation of national guidelines to local needs.

Management and Disposition of Excess Weapons Plutonium National Academy of Sciences, Committee on International Security and Arms Control, Panel on Reactor-Related Options for the Disposition of Excess Weapons

Plutonium,1995-08-06 Within the next decade, many thousands of U.S. and Russian nuclear weapons are slated to be retired as a result of nuclear arms reduction treaties and unilateral pledges. Hundreds of tons of plutonium and highly enriched uranium will no longer be needed for weapons purposes and will pose urgent challenges to international security. This is the supporting volume to a study by the Committee on International Security and Arms Control which dealt with all phases of the management and disposition of these materials. This technical study concentrates on the option for the disposition of plutonium, looking in detail at the different types of reactors in which weapons plutonium could be burned and at the vitrification of plutonium, and comparing them using economic, security and environmental criteria.

Strong and Sustainable Laurence J. Korb,2011 This is a print on demand edition of a hard to find publication. Restoring America's economic health will require dealing with our federal budget deficit over the long term. Reducing that deficit will require reducing the projected level of defense spending over the next 5 years. The defense budget can and should be reduced without harming national security for 3 reasons: (1) The portion of the world's military expend. the U.S. consumes compared to our potential adversaries has grown from 60% to 250%, so even if the U.S. were to cut its spending in half it would still be spending more than its adversaries; (2) The global security environment has changed, so we can reduce the overall size and deployment posture of our armed forces; (3) Significant tech. advances make our fighting forces far more efficient than even in the near past.

Research Reactor Aluminum Spent Fuel National Research Council,Division on Earth and Life Studies,Commission on Geosciences, Environment and Resources,Kevin D. Crowley,Milton Levenson,1998-06-06 The U.S. Department of Energy (DOE) is preparing an environmental impact statement (EIS) for management of aluminum spent fuel from foreign and domestic research reactors, much of which is highly enriched in uranium-235. This EIS will assess the need for additional treatment and storage facilities at the Savannah River Site to accommodate the receipt of this fuel, and it also will assess and select a treatment technology to prepare this fuel for interim storage and eventual shipment to a repository for disposal. This National Research Council book, which was prepared at the request of DOE's Savannah River Office, provides a technical assessment of the technologies, costs, and schedules developed by DOE for eight alternative treatment options and the baseline reprocessing option. It also provides comments on DOE's aluminum spent fuel disposal program, a program that is slated to last for about 40 years and cost in excess of \$2 billion.

Nuclear Wastes National Research Council,Division on Earth and Life Studies,Commission on Geosciences, Environment and Resources,Committee on Separations Technology and Transmutation Systems,1996-02-23 Disposal of radioactive waste from nuclear weapons production and power generation has caused public outcry and political consternation. Nuclear Wastes presents a critical review of some waste management and disposal alternatives to the current national policy of direct disposal of light water reactor spent fuel. The book offers clearcut conclusions for what the nation should do today and what

solutions should be explored for tomorrow. The committee examines the currently used once-through fuel cycle versus different alternatives of separations and transmutation technology systems, by which hazardous radionuclides are converted to nuclides that are either stable or radioactive with short half-lives. The volume provides detailed findings and conclusions about the status and feasibility of plutonium extraction and more advanced separations technologies, as well as three principal transmutation concepts for commercial reactor spent fuel. The book discusses nuclear proliferation; the U.S. nuclear regulatory structure; issues of health, safety and transportation; the proposed sale of electrical energy as a means of paying for the transmutation system; and other key issues.

The Hidden Epidemic Institute of Medicine, Committee on Prevention and Control of Sexually Transmitted Diseases, 1997-04-28 The United States has the dubious distinction of leading the industrialized world in overall rates of sexually transmitted diseases (STDs), with 12 million new cases annually. About 3 million teenagers contract an STD each year, and many will have long-term health problems as a result. Women and adolescents are particularly vulnerable to these diseases and their health consequences. In addition, STDs increase the risk of HIV transmission. The Hidden Epidemic examines the scope of sexually transmitted infections in the United States and provides a critical assessment of the nation's response to this public health crisis. The book identifies the components of an effective national STD prevention and control strategy and provides direction for an appropriate response to the epidemic. Recommendations for improving public awareness and education, reaching women and adolescents, integrating public health programs, training health care professionals, modifying messages from the mass media, and supporting future research are included. The book documents the epidemiological dimensions and the economic and social costs of STDs, describing them as a secret epidemic with tremendous consequences. The committee frankly discusses the confusing and often hypocritical nature of how Americans deal with issues regarding sexuality—the conflicting messages conveyed in the mass media, the reluctance to promote condom use, the controversy over sex education for teenagers, and the issue of personal blame. The Hidden Epidemic identifies key elements of effective, culturally appropriate programs to promote healthy behavior by adolescents and adults. It examines the problem of fragmentation in STD services and provides examples of communities that have formed

partnerships between stakeholders to develop integrated approaches. The committee's recommendations provide a practical foundation on which to build an integrated national program to help young people and adults develop habits of healthy sexuality. The Hidden Epidemic was written for both health care professionals and people without a medical background and will be indispensable to anyone concerned about preventing and controlling STDs.
