**Hydroponics for Beginners** Richard Jones,2020-10-23 Do you want to learn how to easily build an inexpensive DIY hydroponic growing system, cultivate organic vegetables, fruit and herbs at home with hydroponics? If yes, then keep reading... Almost all plants can be grown using hydroponics. When crops are grown in this way, they use up 50% less land and 90% less water when contrasted with traditional crop growing methods. However, the yields from the crops are 4 times more, and the crop growth rate is twice as fast when using hydroponics. This is possible because the crops have everything they would need, at the right concentrations. In place of the soil used in typical agriculture, the farmer or gardener roots the plants in compounds like vermiculite, clay pellets or rock wool. All substances used must be inert so that they do not introduce any new elements into the plant's environment. The solution of water and nutrients is then poured over the support material so that the plant can feed into it. There is also less reliance on fertilizers, pesticides and other potentially harmful products used in conventional agriculture. This book covers the following topics: Introduction to hydroponics Advantages and disadvantages of hydroponics Terminology used in hydroponics Equipment/things you'll need Hydroponic grow systems How to select the best plants Pest and disease control Common mistakes made and how to avoid them ...And much more The development of hydroponics has not only been a response to the current food and resource problems. It is a solution for the future too. Experts say that by 2050, about 80% of all the food produced will be consumed in the cities, which makes it important for the cities to become producers of food. As the world's population is getting close to 7.5 billion and the demand for more food increasing just as fast, with emphasis on resource-intensive foods, it is clear that farming

needs to be done even in the cities, and even so, more productively. Ready to get started? Click Buy Now!

If yes, then keep reading... Growing hydroponically has proven out to be a new yet successful technique to grow crops with the help of water-soluble fertilizers that too without soil, from past few years. Whether you exist to this new system or you are a complete beginner, you need to know the basics of the hydroponic system before you start on its design. This book covers the following topics: What are Hydroponics and his advantages? Pros and Cons of Hydroponics Different Hydroponics Growing System Consideration of Site The Secret for a Successful Hydroponic System Plant nutrition, fertilizer and how to measure fertilizer concentration Common problems of Infestation, Seedling problems and Nutrient deficiencies Myths and Mistakes to Avoid System Maintenance Plant nutrition Operation Greenhouse Best plants for Hydroponics ...And much more It is imperative to understand the basics of how does the hydroponic work. Here are the three most crucial aspects that are prerequisites for the functioning and survival of the plants grown under this system. 1) Substrates- The substrate is the material that anchors your plant's roots. As this farming is carried out without the soil, you need to replace it with such material which can retain moisture, provide firm support, and foster aeration. The substrate is made up of a combination of certain things, including clay pebbles, peat boss, oasis cubes, coconut fiber, lava rocks, and grow stones. There are many varieties of substrates. It solely depends on the plant that you would be growing in the hydroponic system, to decide which substrate you are going to choose. 2) Nutrients- Nutrients are one of the primary sources for the growth which is required by the plants. Providing the appropriate mixture of the nutrient mix in the right amount of water is a must. The plants only depend upon the precise water nutrient mixture to survive and grow, since there is no soil. You can buy commercial nutrient solutions which are available in the market, whereas you can even make the nutrients yourself in your home. 3) Maintenance- Your nutrient solutions need to be checked frequently to ensure the right amount of ph is being dispersed among the plants. If the ph is high or low, it will not let the plant to uptake the nutrients in a thorough manner. Oxygen levels and the temperature also need to be checked regularly. Many hydroponics systems require the water to be changed, clean, and maintaining the equipment to stave off parasites or mold. Let's know about the crucial equipment needed for a successful hydroponic design. We will also discuss how to get effective results from hydroponics. You will need to choose the best equipment to ensure the

success of hydroponic gardening. Are you ready to build your very own hydroponic garden? That's right! I've created this book in order to share my knowledge to you.

**Hydroponic Garden Secrets** Tyler Water,2020-12-04 \*\* B/W EDITION \*\* Do you want to discover a scientific technique for building your own hydroponic garden? Then keep reading... Hydroponics is a means of growing plants without soil. It makes use of nutrient-rich water or a nutrient solution as well as techniques that allow the plant to grow. You can also use sand or gravel, with added nutrients. In this chapter, you are going to learn the history of the growing art that we call hydroponics. You will also learn about some of its practical uses throughout history. Traditionally, the soil is used to grow plants. It was thought that soil was necessary since plants started out in the earth, with nutrient-rich soils like the strawberry plants that were first grown in the wild before being cultivated for gardens. At some point in history, it was discovered that the soil was not necessary for the growing process. Rather, the role of soil is to act as a reservoir to hold the nutrients that a plant needs in order to grow. Crops grown hydroponically, according to studies, grow faster and healthier and are better than crops grown on soil; this is because they would not have to go through a lot of disadvantages that the soil may present, such as; situations of a break out of a soil-borne disease in the area, the struggle to have to push its way through the soil during germination, the attack from organism and pests that live in the soil. And of course, the plants in hydroponic systems do not have to 'hustle' for nutrients and water because this is basically what they are planted in, in hydroponic systems-water-based mineral nutrient solutions. Hydroponics also helps you save water, which sounds a bit strange when you think of water is essential for this process. Usually, it's every alternate day so that the soil soaks up the water and is transported to the roots. That sounds fine, doesn't it? But that's only a portion of the big picture. Some of the water is bound to seep out of the container, some of it evaporates, and a portion of it seeps further into the soil beyond the plant's roots. So, in practice, the plant essentially only uses up a small portion of the water. Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots. It means that the portion of water that isn't absorbed by the plant is directly sent to the reservoir. The same water from the reservoir is later pumped up to the plants. Since the reservoir is shut tight, there is no chance for the water to evaporate, and it certainly will not seep out of the bottom of the container. You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening. This book covers the following topics: Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More! Do not get scared; hydroponic gardening is not as complicated, tricky, and demanding as your mind is about to convince you that it is; on the contrary, it is very simple! And this is what this book is about-to enlighten you and get you started on having your own hydroponic garden. Ready to get started? Click Buy Now!
