**Reader, Come Home** - Maryanne Wolf

2018-08-14

The author of the acclaimed *Proust and the Squid* follows up with a lively, ambitious, and deeply informative book that considers the future of the reading brain and our capacity for critical thinking, empathy, and reflection as we

become increasingly dependent on digital technologies. A decade ago, Maryanne Wolf's *Proust and the Squid* revealed what we know about how the brain learns to read and how reading changes the way we think and feel. Since then, the ways we process written language have changed dramatically with many

concerned about both their own changes and that of children. New research on the reading brain chronicles these changes in the brains of children and adults as they learn to read while immersed in a digitally dominated medium. Drawing deeply on this research, this book comprises a series of letters Wolf writes to us—her beloved readers—to describe her concerns and her hopes about what is happening to the reading brain as it unavoidably changes to adapt to digital mediums. Wolf raises difficult questions, including: Will children learn to incorporate the full range of "deep reading" processes that are at the core of the expert reading brain? Will the mix of a seemingly infinite set of distractions for children's attention and their quick access to immediate, voluminous information alter their ability to think for themselves? With information at their fingertips, will the next generation learn to build their own storehouse of knowledge, which could impede the ability to make analogies and draw

inferences from what they know? Will all these influences change the formation in children and the use in adults of "slower" cognitive processes like critical thinking, personal reflection, imagination, and empathy that comprise deep reading and that influence both how we think and how we live our lives? How can we preserve deep reading processes in future iterations of the reading brain? Concerns about attention span, critical reasoning, and over-reliance on technology are never just about children—Wolf herself has found that, though she is a reading expert, her ability to read deeply has been impacted as she has become increasingly dependent on screens. Wolf draws on neuroscience, literature, education, and philosophy and blends historical, literary, and scientific facts with down-to-earth examples and warm anecdotes to illuminate complex ideas that culminate in a proposal for a biliterate reading brain. Provocative and intriguing, *Reader, Come Home* is a roadmap that provides a cautionary

but hopeful perspective on the impact of technology on our brains and our most essential intellectual capacities—and what this could mean for our future.

**The Political Classroom** - Diana E. Hess  
2014-11-13

WINNER 2016 Grawemeyer Award in Education  
Helping students develop their ability to deliberate political questions is an essential component of democratic education, but introducing political issues into the classroom is

pedagogically challenging and raises ethical dilemmas for teachers. Diana E. Hess and Paula McAvoy argue that teachers will make better professional judgments about these issues if they aim toward creating "political classrooms," which engage students in deliberations about questions that ask, "How should we live together?" Based on the findings from a large, mixed-method study about discussions of political issues within high school classrooms, *The Political Classroom* presents in-depth and engaging cases of teacher practice. Paying particular attention to how political polarization and social inequality affect classroom dynamics, Hess and McAvoy promote a coherent plan for providing students with a nonpartisan political education and for improving the quality of classroom deliberations.

*Basic Issues in Police Performance* - 1982

Since the complexity of police services does not lend itself to standardized performance measures, measurement techniques should be designed to inform more about what police do

and how they affect their communities. This report reviews conventional police measurement practices and offers ways to improve the management value of performance information. Traditional performance measurement has emphasized the measurement of individual departments' effectiveness in preventing crime. This approach fails to consider the broad range of other police duties, citizens' expectations of police, and how police activities produce social change. Police can be evaluated in terms of efficiency, effectiveness, equity, and accountability, but citizens disagree about which of these performance criteria are the most important because community/police problems are too diverse. Instead of developing uniform, inflexible performance standards to apply globally to entire departments, evaluators should ask more detailed questions about common police processes and their results. Sketchy knowledge of how policing works now produces many hypotheses, but rarely standards worthy of

emulation. Evaluators should develop better theories about police functions, obtain more reliable data, and control data collection costs with the aid of police managers so that measures inform departmental policymakers. Tables, diagrams, and 197 references are given. Appendixes include police services study data and a list of problem codes.

Super PACs - Louise I. Gerdes 2014-05-20

The passage of Citizens United by the Supreme Court in 2010 sparked a renewed debate about campaign spending by large political action committees, or Super PACs. This book provides a wide range of opinions on the issue. Includes primary and secondary sources from a variety of perspectives; eyewitnesses, scientific journals, government officials, and many others.

**No Citizen Left Behind** - Meira Levinson

2012-05-08

While teaching at an all-black middle school in Atlanta, Meira Levinson realized that students' individual self-improvement would not necessarily enable them to overcome their profound marginalization within American society. This is because of a civic empowerment gap that is as shameful and antidemocratic as the academic achievement gap targeted by No Child Left Behind. No Citizen Left Behind argues that students must be taught how to upend and reshape power relationships directly, through political and civic action. Drawing on political theory, empirical research, and her own on-the-ground experience, Levinson shows how de facto segregated urban schools can and must be at the center of this struggle. Recovering the civic purposes of public schools will take more than tweaking the curriculum. Levinson calls on schools to remake civic education. Schools should teach collective action, openly discuss the racialized dimensions of citizenship, and provoke

students by engaging their passions against contemporary injustices. Students must also have frequent opportunities to take civic and political action, including within the school itself. To build a truly egalitarian society, we must reject myths of civic sameness and empower all young people to raise their diverse voices. Levinson's account challenges not just educators but all who care about justice, diversity, or democracy.

Classic Books Library presents this brand new edition of "The Federalist Papers", a collection of separate essays and articles compiled in 1788 by Alexander Hamilton. Following the United States Declaration of Independence in 1776, the governing doctrines and policies of the States lacked cohesion. "The Federalist", as it was previously known, was constructed by American statesman Alexander Hamilton, and was

Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755-1804) was an American lawyer, journalist and highly influential government official. He also served as a Senior Officer in the Army between 1799-1800 and founded the Federalist Party, the system that governed the nation's finances. The life of each—Washington, Adams, Jefferson, Franklin, Hamilton, Madison, Paine—is presented individually as well as collectively, but the thread that binds these portraits together is the idea of character as a lived reality. They were members of the first generation in history that was self-consciously self-made men who understood that the arc of lives, as of nations, is one of moral progress.
