Light Gauge Metal Structures Recent Advances Jacques Rondal, Dan Dubina, 2007-08-08 The aim of this book is to review recent research and technical advances, including the progress in design codes, related to the engineering applications of light gauge metal sections made in carbon, high strength and stainless steel, as well as aluminium alloys. Included is a review of the new technologies for connections of light gauge metal members. Main advanced applications, for residential, non residential and industrial buildings and pallet rack systems are also covered. For the first time, this book takes into account all the metallic materials now used more and more for structural components. The book will be of great interest not only for researchers but also for design engineers faced to the use of new metallic materials in modern structural applications.

Steel-frame House Construction Timothy J. Waite, 2000 One of the first really thorough instruction manuals on how to construct residences using steel framing instead of wood, and written by Tim Waite of the NAHB. Fire Performance of Thin-Walled Steel Structures Yong Wang, Mahen Mahendran, Ashkan Shahbazian, 2020-04-01 This book is an authoritative account of the latest developments in fire performance and fire resistant design of thin-walled steel structures. It provides a comprehensive review of recent research, including fire tests of thin-walled steel structural members and systems, numerical modelling of heat transfer and structural behaviour, elevated temperature material properties, methods of improving fire resistance of thin-walled steel structures, and performance based fire resistant design methods. Worked examples navigate the reader through some of the complexities of this specialist subject. This is the first book devoted to the fundamental principles of this emerging subject, as thin-walled steel structures are increasingly being used in building construction. It will be valuable to fire protection engineers who want to optimise fire resistant design of thin-walled steel structures, and specialist manufacturers needing to control fire resistance of thin-walled steel structural systems, as well as to the research community.
