Schur later simplified the rather complicated theory of Frobenius to a considerable extent by using a lemma now called Schur's lemma. The methods used were based on matrix representations and characters. *A survey on projectively equivalent representations of finite ...* In Section 4 we present some of Karpilovsky's results on irreducible projective representations of some classes of finite groups which are important in physics: direct products of cyclic groups of the same order, dihedral groups and symmetric groups (Theorem 58, Theorem 59, ...
