Protective Groups - Organic Chemistry Portal WEB What are protective groups? A protective group (also referred to as "protecting group") is a reversibly formed derivative of an existing functional group in a molecule The protective group is temporarily attached to decrease reactivity so that the protected functional group does not react under synthetic conditions to which the molecule is . Protective Groups in Synthetic Organic Chemistry OTBS WEB Protective Groups: Background and General Considerations Tactical considerations to consider for each protecting group selected in a synthesis: It should be easily and efficiently introduced It should be cheap and readily available It should be easy to characterize and avoid the introduction of new stereogenic centers. Protecting Groups in Organic Synthesis | ChemTalk WEB Protecting Group Basics Protective groups add to the existing functional groups to prevent them from future reaction There are many different protecting groups based on the functional group which needs protection, and the reactions it needs protection from However, all of these different protecting groups share some qualities. 39: Protecting Groups

 Synthesis of complex organic molecules often
 requires the use of multiple protecting groups for
 similar or identical functional groups When one
 protecting group can be selectively removed by
 applying specific reaction conditions that don't
 affect the other groups and vice versa, these two

protecting groups are orthogonal to each other.
