Uncovering Student Ideas in Life Science Page Keeley, 2011 Author Page Keeley continues to provide KOCO12 teachers with her highly usable and popular formula for uncovering and addressing the preconceptions that students bring to the classroom. The formative assessment probe in this first book devoted exclusively to life science in her Uncovering Student Ideas in Science series. Keeley addresses the topics of life and its diversity; structure and function; life processes and needs of living things; ecosystems and change; reproduction, life cycles, and heredity; and human biology.

Business Law in Canada Richard Yates, 1998-06-15 Appropriate for one-semester courses in Administrative Law at both college and university levels. Legal concepts and Canadian business applications are introduced in a concise, one-semester format. The text is structured so that five chapters on contracts form the nucleus of the course, and the balance provides stand-alone sections that the instructor may choose to cover in any order. We've made the design more reader-friendly, using a visually appealing four-colour format and enlivening the solid text with case snippets and extracts. The result is a book that maintains the strong legal content of previous editions while introducing more real-life examples of business law in practice.

I Am a Strange Loop Douglas R. Hofstadter, 2007-03-27 Argues that the key to understanding ourselves and consciousness is the strange loop, a special kind of abstract feedback loop that inhabits the brain.

Cat Sense John Bradshaw, 2013-09-10 Cats have been popular household pets for thousands of years, and their numbers only continue to rise. Today there are three cats for every dog on the planet, and yet cats remain more mysterious, even to their most adoring owners. Unlike dogs, cats evolved as solitary hunters, and, while many have learned to live alongside humans and even feel affection for us, they still don't quite "get us" the way dogs do, and perhaps they never will. But cats have rich emotional lives that we need to respect and understand if they are to thrive in our company. In *Cat Sense*, renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before, using cutting-edge scientific research to dispel the myths and explain the true nature of our feline friends. Tracing the cat's evolution from lone predator to domesticated companion, Bradshaw shows that although cats and humans have been living together for at least eight thousand years, cats remain independent, predatory, and wary of contact with their own kind, qualities that often

clash with our modern lifestyles. Cats still have three out of four paws firmly planted in the wild, and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10,000 years ago. Cats are astonishingly flexible, and given the right environment they can adapt to a life of domesticity with their owners—but to continue do so, they will increasingly need our help. If we're to live in harmony with our cats, Bradshaw explains, we first need to understand their inherited quirks: understanding their body language, keeping their environments—however small—sufficiently interesting, and becoming more proactive in managing both their natural hunting instincts and their relationships with other cats. A must-read for any cat lover, *Cat Sense* offers humane, penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets' lives—and ours.

Learning and Behavior Paul Chance, 2013-02-26 *LEARNING AND BEHAVIOR*, Seventh Edition, is stimulating and filled with high-interest queries and examples. Based on the theme that learning is a biological mechanism that aids survival, this book embraces a scientific approach to behavior but is written in clear, engaging, and easy-to-understand language.

Using Research and Reason in Education Paula J. Stanovich, Keith E. Stanovich, 2003 As professionals, teachers can become more effective and powerful by developing the skills to recognize scientifically based practice and, when the evidence is not available, use some basic research concepts to draw conclusions on their own. This paper offers a primer for those skills that will allow teachers to become independent evaluators of educational research.

Why Zebras Don't Get Ulcers Robert M. Sapolsky, 2004-09-15 Renowned primatologist Robert Sapolsky offers a completely revised and updated edition of his most popular work, with over 225,000 copies in print Now in a third edition, Robert M. Sapolsky's acclaimed and successful *Why Zebras Don't Get Ulcers* features new chapters on how stress affects sleep and addiction, as well as new insights into anxiety and personality disorder and the impact of spirituality on managing stress. As Sapolsky explains, most of us do not lie awake at night worrying about whether we have leprosy or malaria. Instead, the diseases we fear—and the ones that plague us now—are illnesses brought on by the slow accumulation of damage, such as heart disease and cancer. When we worry or experience stress, our body turns on the same physiological responses that an animal's does, but we do not resolve conflict in the same way—through fighting or fleeing. Over time, this activation of a stress response makes us literally sick. Combining cutting-edge research with a healthy dose of good humor and practical advice, *Why Zebras Don't Get Ulcers* explains how prolonged stress causes or intensifies a range of physical and mental afflictions, including depression, ulcers, colitis, heart disease, and more. It also provides essential guidance to controlling our stress responses. This new edition promises to be the most comprehensive and engaging one yet.

The Food Safety Information Handbook Cynthia A. Roberts, 2001-07-30 Outbreaks of E. Coli and Salmonella from eating tainted meat or chicken and Mad Cow Disease have consumers and the media focused on food safety-related topics. This

handbook aimed at students as well as consumers is an excellent starting point for locating both print and electronic resources with timely information about food safety issues, organizations and associations, and careers in the field.

The Double Helix James D. Watson,1969-02 Since its publication in 1968, *The Double Helix* has given countless readers a rare and exciting look at one highly significant piece of scientific research-Watson and Crick's race to discover the molecular structure of DNA.

Spartan Up! Joe De Sena,Jeff O'Connell,2014 An introduction to Spartan Races (races meant to challenge, to push, to intimidate, to test) from one of the founding few and creators, Joe De Sena.

By Any Greens Necessary Tracye Lynn McQuirter,2010-05-01 * The first vegan guide geared to African American women * More than forty delicious and nutritious recipes highlighted with color photographs * Menus and advice on transitioning from omnivore to vegan * Resource information and a comprehensive shopping list for restocking the fridge and pantry African American women are facing a health crisis: Heart disease, stroke, and diabetes occur more frequently among them than among women of other races. Black women comprise the heftiest group in the nation—80 percent are overweight, and 50 percent obese. Decades of studies show that these chronic diseases can be prevented and even reversed with a plant-based diet. But how can you control your weight and health without sacrificing great food and gorgeous curves? Just ask Tracye Lynn McQuirter. With attitude, inspiration, and expertise, in *By Any Greens Necessary* McQuirter shows women how to stay healthy, hippy, and happy by eating plenty of fresh fruits and vegetables, whole grains, and legumes as part of an active lifestyle. The book is a call to action that all women should heed.

Buyology Martin Lindstrom,2010-02-02 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today's message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

The Future of Technology Tom Standage,2005-08-01 From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more

stately period during which the technology is actually deployed properly. This collection of surveys and articles from *The Economist* examines how far technology has come and where it is heading. Part one looks at topics such as the “greying” (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the “digital Swiss Army knife”; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

Avant-garde Videogames Brian Schrank, 2014-04-18 An exploration of avant-garde games that builds upon the formal and political modes of contemporary and historical art movements. The avant-garde challenges or leads culture; it opens up or redefines art forms and our perception of the way the world works. In this book, Brian Schrank describes the ways that the avant-garde emerges through videogames. Just as impressionism or cubism created alternative ways of making and viewing paintings, Schrank argues, avant-garde videogames create alternate ways of making and playing games. A mainstream game channels players into a tightly closed circuit of play; an avant-garde game opens up that circuit, revealing (and reveling in) its own nature as a game. We can evaluate the avant-garde, Schrank argues, according to how it opens up the experience of games (formal art) or the experience of being in the world (political art). He shows that different artists use different strategies to achieve an avant-garde perspective. Some fixate on form, others on politics; some take radical positions, others more complicit ones. Schrank examines these strategies and the artists who deploy them, looking closely at four varieties of avant-garde games: radical formal, which breaks up the flow of the game so players can engage with its materiality, sensuality, and conventionality; radical political, which plays with art and politics as well as fictions and everyday life; complicit formal, which treats videogames as a resource (like any other art medium) for contemporary art; and complicit political, which uses populist methods to blend life, art, play, and reality—as in alternate reality games, which adapt Situationist strategies for a mass audience.

The Big Breach Richard Tomlinson, 2001 Richard Tomlinson was recruited initially by MI6, the British foreign intelligence service, during his senior year at Cambridge University. In these memoirs, he claims to have quickly gained the trust and confidence of one of the world's most effective intelligence organizations, and that he was relied on to smuggle nuclear secrets out of Moscow. Tomlinson also writes that he ran an undercover operation in Sarajevo while the city was under siege, and infiltrated and dismantled a criminal group that sought to export chemical weapons capabilities to Iran.

The Lifebox, the Seashell, and the Soul: What Gnarly Computation Taught Me About Ultimate Reality, The Meaning of Life, And How to Be Happy Rudy Rucker, 2016-10-31 A playful and profound survey of the concept of computation across the entire spectrum of human thought—written by a mathematician novelist who spent twenty years as a Silicon Valley computer scientist. The logic is correct, and the conclusions are startling. Simple rules can generate gnarly patterns. Physics obeys laws, but the outcomes aren't predictable. Free will is real. The mind is like a quantum computer. Social strata are skewed by universal scaling laws. And there can never be a simple trick for answering all possible questions about our world's natural processes. We live amid splendor beyond our control.

MASTERING DATA MINING: THE ART AND SCIENCE OF CUSTOMER RELATIONSHIP MANAGEMENT Michael J. A. Berry, Gordon S. Linoff, 2008-09-01 Special Features: · Best-in-class data mining techniques for solving critical problems in all areas of business· Explains how to pick the right data mining techniques for specific problems· Shows how to perform analysis and evaluate results· Features real-world examples from across various industry sectors· Companion Web site with updates on data mining products and service providers About The Book: Companies have invested in building data warehouses to capture vast amounts of customer information. The payoff comes with mining or getting access to the data within this information gold mine to make better business decisions. Readers and reviewers loved Berry and Linoff's first book, *Data Mining Techniques*, because the authors so clearly illustrate practical techniques with real benefits for improved marketing and sales. *Mastering Data Mining* takes off from there—assuming readers know the basic techniques covered in the first book, the authors focus on how to best apply these techniques to real business cases. They start with simple applications and work up to the most powerful and sophisticated examples over the course of about 20 cases. (Ralph Kimball used this same approach in his highly successful *Data Warehouse Toolkit*). As with their first book, *Mastering Data Mining* is sufficiently technical for database analysts, but is accessible to technically savvy business and marketing managers. It should also appeal to a new breed of database marketing managers.

Microserfs Douglas Coupland, 2011-06-21 From the era-defining author of *Generation X* comes a novel of overworked coders who escape the serfdom of Bill Gates to forge their own path. They are Microserfs—six code-crunching computer whizzes who spend upward of sixteen hours a day “coding” and eating “flat” foods (food which, like Kraft singles, can be passed underneath closed doors) as they fearfully scan company e-mail to learn whether the great Bill is going to “flame” one of them. But now there's a chance to become innovators instead of cogs in the gargantuan Microsoft machine. The intrepid Microserfs are striking out on their own—living together in a shared digital flophouse as they desperately try to cultivate well-rounded lives and find love amid the dislocated, subhuman whirl and buzz of their computer-driven world.
