Innovation in Pharmacy: Advances and Perspectives. September 2018 Organizer Committee IPAP18 - Salamanca, 2018-09-21 This book contains the summaries of the Innovation in Pharmacy: Advances and Perspectives that took place in Salamanca (Spain) in September 2018. The early science of chemistry and microbiology were the source of most drugs until the revolution of genetic engineering in the mid 1970s. Then biotechnology made available novel protein agents such as interferons, blood factors and monoclonal antibodies that have changed the modern pharmacy. Over the past year, a new pharmacy of oligonucleotides has emerged from the science of gene expression such as RNA splicing and RNA interference. The ability to design therapeutic agents from genomic sequences will transform treatment for many diseases. The science that created this advance and its future promise will be discussed. Phillip Allen Sharp is an American geneticist and molecular biologist who co-discovered RNA splicing. He shared the 1993 Nobel Prize in Physiology or Medicine with Richard J. Roberts for "the discovery that genes in eukaryotes are not contiguous strings but contain introns, and that the splicing of messenger RNA to delete those introns can occur in different ways, yielding different proteins from the same DNA sequence. He works in Institute Professor Koch Institute for Integrative Cancer Research, Massachusetts Institute of Technology (MIT), Cambridge, MA, US. Este libro recoge los resúmenes de la «Innovation in Pharmacy: Advances and Perspectives» que tuvo lugar en Salamanca (España) en septiembre de 2018. La ciencia primitiva de la química y la microbiología fue la fuente de la mayoría de las drogas hasta la revolución de la ingeniería genética a mediados de la década

de 1970. Luego, la biotecnología puso a disposición agentes proteínicos novedosos como interferones, factores sanguíneos y anticuerpos monoclonales que han cambiado la farmacia moderna. Durante el año pasado, surgió una nueva farmacia de oligonucleótidos a partir de la ciencia de la expresión génica, como el empalme de ARN y la interferencia de ARN. La capacidad de diseñar agentes terapéuticos a partir de secuencias genómicas transformará el tratamiento de muchas enfermedades. La ciencia que creó este avance y su promesa futura será discutida. Phillip Allen Sharp es un genetista y biólogo molecular estadounidense que co-descubrió el empalme de ARN. Compartió el Premio Nobel de 1993 en Fisiología o Medicina con Richard J. Roberts por el descubrimiento de que los genes en eucariotas no son cadenas contiguas, sino que contienen intrones, y que el empalme del ARN mensajero para eliminar esos intrones puede ocurrir de diferentes maneras, produciendo diferentes proteínas de la misma secuencia de ADN. Trabaja en el Instituto Profesor Koch Institute for Integrative Cancer Research, Instituto Tecnológico de Massachusetts (MIT), Cambridge, MA, EE. UU.

BIO2010 National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Committee on Undergraduate Biology Education to Prepare Research Scientists for the 21st Century, 2003-02-13 Biological sciences have been revolutionized, not only in the way research is conducted— with the introduction of techniques such as recombinant DNA and digital technology— but also in how research findings are communicated among professionals and to the public. Yet, the undergraduate programs that train biology researchers remain much the same as they were before these fundamental changes came on the scene. This new volume provides a blueprint for bringing undergraduate biology education up to the speed of today's research fast track. It includes recommendations for teaching the next generation of life science investigators, through: Building a strong interdisciplinary curriculum that includes physical science, information technology, and mathematics. Eliminating the administrative and financial barriers to cross-departmental collaboration. Evaluating the impact of medical college admissions testing on undergraduate biology education. Creating early opportunities for independent research. Designing meaningful laboratory experiences into the curriculum. The committee presents a dozen brief case studies of exemplary programs at leading institutions and lists many resources for biology educators. This volume will be important to biology faculty, administrators, practitioners, professional societies, research and education funders, and the biotechnology industry.

Inclusion Matters World Bank, 2013-11-26 This report tries to put boundaries around the abstraction that is social inclusion. It is intended for policy makers, academics, activists and development partners - indeed anyone who is curious about how to address inclusion in a world that is witness to intense demographic, spatial, economic and technological transitions. Placing the discussion of social inclusion within such global transitions and transformations, it argues that social inclusion is an evolving agenda. While it does not purport to provide definitive answers as to how to achieve social inclusion in any given context, the report offers an easy-to-use definition and a framework to assist practitioners in asking, outlining

and developing some of the right questions that can help advance the agenda of inclusion in different contexts. There are seven main messages in this report: 1. Excluded groups exist in all countries. 2. Excluded groups are consistently denied opportunities. 3. Intense global transitions are leading to social transformations that create new opportunities for inclusion as well as exacerbating existing forms of exclusion. 4. People take part in society through markets, services, and spaces. 5. Social and economic transformations affect the attitudes and perceptions of people. As people act on the basis of how they feel, it is important to pay attention to their attitudes and perceptions. 6. Exclusion is not immutable. Abundant evidence demonstrates that social inclusion can be planned and achieved. 7. Moving ahead will require a broader and deeper knowledge of exclusion and its impacts as well as taking concerted action.

Laboratory Life Bruno Latour, Steve Woolgar, 2013-04-04 This highly original work presents laboratory science in a deliberately skeptical way: as an anthropological approach to the culture of the scientist. Drawing on recent work in literary criticism, the authors study how the social world of the laboratory produces papers and other texts, and how the scientific vision of reality becomes that set of statements considered, for the time being, too expensive to change. The book is based on field work done by Bruno Latour in Roger Guillemin's laboratory at the Salk Institute and provides an important link between the sociology of modern sciences and laboratory studies in the history of science.

Medical Physiology: A Systems Approach Hershel Raff, Michael G. Levitzky, 2011-03-22 A concise, clinically oriented overview of physiology Medical Physiology: A Systems Approach offers a succinct yet thorough overview of physiology along with an introduction to basic science principles and their relevance to the clinical expression of disease. The book reflects medical education's increased emphasis on providing students with more clinically oriented content during their first two years of medical school and the importance of the essential concepts of pathophysiology. Focused and clearly written, Medical Physiology: A Systems Approach details the major physiological processes involved in both health and disease. Each chapter begins with a list of Objectives, includes Key Concepts, and ends with Study Questions designed to test your knowledge of major concepts covered in that chapter. Most chapters also include Clinical Correlations that reinforce the major physiological principles covered and illustrate their importance to understanding disease states.

The Craft and Science of Coffee Britta Folmer, 2016-12-16 The Craft and Science of Coffee follows the coffee plant from its origins in East Africa to its current role as a global product that influences millions of lives through sustainable

development, economics, and consumer desire. For most, coffee is a beloved beverage. However, for some it is also an object of scientific study, and for others it is approached as a craft, both building on skills and experience. By combining the research and insights of the scientific community and expertise of the crafts people, this unique book brings readers into a sustained and inclusive conversation, one where academic and industrial thought leaders, coffee farmers, and baristas are quoted, each informing and enriching each other. This unusual approach guides the reader on a journey from coffee farmer to roaster, market analyst to barista, in a style that is both rigorous and experience based, universally relevant and personally engaging. From on-farming processes to consumer benefits, the reader is given a deeper appreciation and understanding of coffee's complexity and is invited to form their own educated opinions on the ever changing situation, including potential routes to further shape the coffee future in a responsible manner. - Presents a novel synthesis of coffee research and real-world experience that aids understanding, appreciation, and potential action - Includes contributions from a multitude of experts who address complex subjects with a conversational approach - Provides expert discourse on the coffee value chain, from agricultural and production practices, sustainability, post-harvest processing, and quality aspects to the economic analysis of the consumer value proposition - Engages with the key challenges of future coffee production and potential solutions

Interprofessional Education for Collaboration Institute of Medicine, Board on Global Health, Global Forum on Innovation in Health Professional Education, 2013-11-03 Every year, the Global Forum undertakes two workshops whose topics are selected by the more than 55 members of the Forum. It was decided in this first year of the Forum's existence that the workshops should lay the foundation for future work of the Forum and the topic that could best provide this base of understanding was interprofessional education. The first workshop took place August 29-30, 2012, and the second was on November 29-30, 2012. Both workshops focused on linkages between interprofessional education (IPE) and collaborative practice. The difference between them was that Workshop 1 set the stage for defining and understanding IPE while Workshop 2 brought in speakers from around the world to provide living histories of their experience working in and between interprofessional education and interprofessional or collaborative practice. A committee of health professional education experts planned, organized, and conducted a 2-day, interactive public workshop exploring issues related to innovations in health professions education (HPE). The committee involved educators and other innovators of curriculum development and pedagogy and will be drawn from at least four health disciplines. The workshop followed a high-level framework and established an orientation for the future work of the Global Forum on Innovations in Health Professional Education. *Interprofessional Education for Collaboration: Learning How to Improve Health from Interprofessional Models Across the Continuum of Education to Practice* summarizes the presentations and small group discussions that focused on innovations in five areas of HPE: 1. Curricular innovations - Concentrates on what is being taught to health professions'

learners to meet evolving domestic and international needs; 2. Pedagogic innovations - Looks at how the information can be better taught to students and WHERE education can take place; 3. Cultural elements - Addresses who is being taught by whom as a means of enhancing the effectiveness of the design, development and implementation of interprofessional HPE; 4. Human resources for health - Focuses on how capacity can be innovatively expanded to better ensure an adequate supply and mix of educated health workers based on local needs; and 5. Metrics - Addresses how one measures whether learner assessment and evaluation of educational impact and care delivery systems influence individual and population health.

Organic Sulfur Compounds N. Kharasch, 2013-10-22 *Organic Sulfur Compounds, Volume I* deals with the chemistry of organic sulfur compounds such as disulfides, polysulfides, olefins, acetylenes, and chloroethylenes. Topics covered range from the inorganic acids of sulfur and the thermodynamics of organic sulfur compounds to some applications of isotopic sulfur and the stereochemistry of disulfides and polysulfides. The mechanism of oxidation of thiols to disulfides is also discussed. Comprised of 40 chapters, this volume first considers the precise structures of elemental sulfur in relation to the reactions of sulfur compounds, followed by an analysis of the inorganic acids of sulfur. The reader is then introduced to the thermodynamics of organic sulfur compounds and the bonding characteristics of the sulfur atom, as well as the infrared spectra of organosulfur compounds. Subsequent chapters focus on the ionic scission of the sulfur-sulfur bond; nucleophilic reactions of thiols with acetylene and chloroethylene; reactions of sulfur with olefins; and the chemistry of isothiocyanates. This book should prove useful to advanced students, practitioners, and research workers in the field of organic chemistry.

Handbook of Enology, Volume 1 Pascal Ribéreau-Gayon, Denis Dubourdieu, B. Donèche, A. Lonvaud, 2006-05-01 The *Microbiology* volume of the new revised and updated *Handbook of Enology* focuses on the vinification process. It describes how yeasts work and how they can be influenced to achieve better results. It continues to look at the metabolism of lactic acid bacteria and of acetic acid bacteria, and again, how can they be treated to avoid disasters in the winemaking process.

and how to achieve optimal results. The last chapters in the book deal with the use of sulfur-dioxide, the grape and its maturation process, harvest and pre-fermentation treatment, and the basis of red, white and speciality wine making. The result is the ultimate text and reference on the science and technology of the vinification process: understanding and dealing with yeasts and bacterias involved in the transformation from grape to wine. A must for all serious students and practitioners involved in winemaking.

Divine Testimony Larry Stalley,2025-04-15 Is the Shroud of Turin the actual burial cloth that once wrapped the corpse of Jesus? If it is, why were the Gospel writers silent about its mysterious, full-body image? Might there actually be cryptic references to the image within the New Testament that have gone unnoticed until now? And if there are such references, why are they cryptic? What has science discovered about the image on the Shroud? And are there historical references or artifacts associated with the Shroud outside the biblical canon from the period of the early Church? Those important and intriguing questions are addressed by this book. The significance of this work is monumental, both with regard to New Testament studies and with regard to our understanding of the Shroud of Turin! The book's focus—that hidden or cryptic statements concerning the Shroud and its incredible image actually exist within the Bible—is a game changer with respect to (1) the quest for the historical Jesus, (2) the existence of biblical evidence supporting the authenticity of the Turin Shroud, and (3) the believer's assurance of personal resurrection and eternal life!
