Reinventing the Library for Online Education Frederick Stielow, 2014 Have changes such as cloud computing, search engines, the Semantic Web, and mobile applications rendered such long-standing academic library services and functions as special collections, interlibrary loans, physical processing, and even library buildings unnecessary? Can the academic library effectively reconceive itself as a virtual institution? Stielow, who led the library program of the online university American Public University System, argues most emphatically that it can. His comprehensive look at web-based academic libraries synthesizes the changes wrought by the Web revolution into a visionary new model, grounded in history as well as personal experience. He demonstrates how existing functions like cataloging, circulation, collection development, reference, and serials management can be transformed by entrepreneurship, human face/electronic communicator relations, web apps, and other innovations. Online education can ensure that libraries remain strong information and knowledge hubs, and his timely book Shows how the origins and history of the academic library have laid the foundation for our current period of flux Identifies practices rooted in print-based storage to consider for elimination, and legacy services ready to be adapted to

virtual operations Discusses tools and concepts libraries will embrace in a networked world, including new opportunities for library relevance in bookstore/textbook operations, compliance, library/archival/museum functions, e-publishing, and tutorial services Offers a thorough examination of the virtual library infrastructure crucial for an online learning program, with a special look at the particular needs and responsibilities of online librarians Looks at the evolving relationship between higher education and copyright, and posits how educational technology will bring further changes Bursting with stimulating ideas and wisdom gleaned from first-hand experience, Stielow's book presents a model for offering outstanding higher education library services in an increasingly online environment.

Virtual Services in the Health Sciences Library Amanda R. Scull, 2022-05-15 Virtual services have been part of health sciences libraries for a long time in various forms, including the provision of reference and research services via email or chat, availability of online instruction, access to electronic materials, and the curation of virtual research guides. But when the COVID-19 pandemic forced many libraries to close their doors and pivot to virtual services almost overnight. Moving all services remote, even for just a short time, did highlight what worked well and what did not. The situation increased visibility of these services and made patrons more aware of what was available, perhaps making them more likely to expect and use those services in the future. In some ways, the pandemic showed us ways in which virtual services could even be better than in person services for providing prompt patron services. The situation increased visibility of existing services, making users more aware of what was available, and revealed gaps and needed improvements in virtual services. In this book copublished by the Medical Library Association, librarians from academic to hospital health sciences libraries, from rural to urban areas, and across a range of service specialties provide blueprints and best practices for building and maintaining sustainable virtual services in health sciences libraries. Each chapter in this volume addresses aspects of providing virtual services in information and access services, reference and instruction, collections, and clinical services written by contributors who have been involved in this work in their own libraries. Whether you are just beginning an implementation, assessing and refining current offerings, or strategizing for sustainability and looking to the future, this book will provide practical advice, tools, and considerations for maximizing user engagement and satisfaction with virtual library services and resources.

Written by practitioners in their field of expertise, this book documents the history of distributed learning and discusses current issues in distributed learning librarianship, with a special focus on the role of technology. Information Literacy Meets Library 2.0 Peter Godwin,Jo Parker,2008 Web 2.0 technologies have been seen by many information professionals as critical to the future development of library services. This has led to the use of the term Library 2.0 to denote the kind of service that is envisaged. There has been considerable debate about what Library 2.0 might encompass, but, in the context of information literacy, it can be described as the application of interactive, collaborative, and multimedia technologies to web-based library services and collections. These developments challenge librarians involved in information literacy with more complex and diverse web content, a range of exciting new tools with which to teach, and a steep learning curve to adjust to the constant change of the Web 2.0 world. This edited collection from an international team of experts provides a practically-based overview of emerging Library 2.0 tools and technologies for information literacy practitioners; addresses the impact of the adoption of these technologies on information literacy teaching; provides case study exemplars for practitioners to help inform their practice; and examines the implications of Library 2.0 for the training of information literacy professionals. Key topics include: School Library 2.0: new skills and knowledge for the future information literacy, Web 2.0 and public libraries the blog as an assessment tool using Wikipedia to eavesdrop on the scholarly conversation information literacy and RSS feeds library instruction on the go: podcasting sparking Flickr's of insight into controlled vocabularies and subject searching joining the YouTube conversation to teach information literacy going beyond Google teaching information literacy through digital games. Readership: This book will be essential reading for all library and information practitioners and policy makers with responsibility for developing and delivering information literacy programmes to their users. It will also be of great interest to students of library and information studies.
